Secure email. Change user behavior.
Block phishing attempts and coach users to make safe decisions easily – with the only behavioral email security platform.

Play tough defense against email threats.
Keep bad actors out and coach users to make safe decisions – everywhere, all the time – with the only behavioral email security platform.

- Block impersonators, phishing attempts, and ransomware attacks with intuitive user coaching.
- Say no to account takeovers with sender profiling and social graphing that detects anomalies.
- Detect and prevent data loss with interactive safeguards for outgoing emails.

inky.com
Play tough defense against email impersonation.

Detect the behaviors of the most sophisticated attackers with technology that’s always getting smarter to keep you ahead of brand forgery and account takeovers.

Coach users to make smart decisions – everywhere, all the time.

Periodic security training is no match for distracted, busy users. Instead, use live mail to continuously coach everyone to make safe choices in real-time across any device or email client.

Ease the burden on your IT team.

Fast to install, and easy to manage. Admins have complete control over setup and total flexibility in managing how your end-users will interact with INKY’s banners. Reporting and visualization tools gives you in-depth awareness of all email activity at all times.
INKY’s behavioral email security platform catches everything.

Like a security coach, it signals suspicious behaviors with interactive banners that guide users to take safe action on any device or email client. IT teams don’t face the burden of filtering every email themselves or maintaining multiple systems. Through powerful technology and intuitive user engagement, INKY keeps bad actors out for good.

**Inbound Mail Protection**
Block phishing and coach users in real time.

**Internal Mail Protection**
Protect internal email traffic against account takeovers.

**Outbound Mail Protection**
Prevent data loss with interactive safeguards for outgoing emails.

**Advanced Attachment Analysis**
Detect deeply hidden malware from inbound attachments.

**Email Encryption**
Guard sensitive data with fast and simple encryption.

inky.com
Phishing is still the number one cause of corporate data breaches, and the hooks are getting sharper. Most people don't realize how far the problem has advanced. Today's criminals employ various incredibly sophisticated techniques that elude even the most skeptical and well-trained eyes. This is where INKY excels. Through innovative computer vision, AI, and machine learning INKY catches everything.

**Key Capabilities**

**Social Graphing**
INKY gets to know users and detects anyone impersonating someone from within the organization or external.

**Computer Vision**
Self-adapting AI algorithms and a deep understanding of how email works is what makes INKY effective at keeping up with zero-day attacks.

**The Banner**
Color-coded banners on every email offer threat assistance to your employees in real-time.

**Mobile Protection**
Email protection that works across any device and any email client.

**The Dashboard**
Admins have complete control over customization and how your end-users will interact with INKY’s banners.

**Reporting**
Identify, analyze, and remediate from one pane of glass, making it easy to identify trends and share reports with the executive team.
