

Why INKY for Managed Services?

INKY is a cloud-based email security platform designed with Managed Service Providers in mind. INKY's use of machine learning, cluster analysis, visual computing, and social graphing makes it the most effective solution available. A multifaceted approach to anti-phishing technology prevents dangerous phishing threats from reaching the inbox while educating the recipient.

The INKY Edge: A Two-Pronged Approach with Computer Vision

Nearly three dozen computer-vision and text-analysis models analyze each email as both a person and a machine does. The message is rendered in a headless Chrome browser into a visual representation of the actual email. INKY then matches the logos, fonts, and colors to brands. Using fuzzy logic and cluster analysis, INKY can detect even logos that have been altered slightly to evade explicit pattern-matching. The machine side looks at header information, doing DMARC analysis on DKIM and SPF records and other validity tests. INKY compares what the email "is trying to be" with what it actually is, checking to see whether the message originates from an email server under the control of the brand implied by the visual elements.

A Behavioral Model for Every Sender

INKY uses social graphing as a key tool in its anti-phishing arsenal. Once INKY is installed, it starts building dynamic profiles and behavior models of legitimate senders for all protected recipients. As the models grow, INKY uses anomaly detection to filter out and block impersonation attempts.

The INKY Difference

Protect and Educate

There are four million lines of code that enable INKY's unique banners to work, but your clients will never have to encounter any of them. What they will experience, is a seamless system that catches the most elusive threats, while protecting, training, and empowering users across the enterprise.

No Installation Required

INKY is a cloud-based solution and can be completely installed in 1 - 2 hours with no client software installation needed. INKY is installed in line and works its magic independently of other system elements. INKY works on all platforms, email clients, and devices.

Advanced Reporting Capabilities

The Administrator reporting dashboard shows which threats have been identified and blocked. Administrators can run time-bounded queries to view what threats have been encountered and blocked and can drill down into individual messages.

Multi-Tenancy Solution

INKY was built as a multi-tenant solution from the ground up. Robust role-based access controls ensure each tenant's data is isolated and remains invisible to others, giving admins flexibility to manage clients with ease.

Easy to Deploy and Fully Scalable

INKY deploys inline, integrating with Microsoft 365, Exchange, or Google Workspace. INKY supports quick deployment, staged roll-out to users by groups, and the ability to quarantine, folder, or drop malicious email using standard controls.

Simple to Administer

The Admin Control Panel puts the entire phishing landscape at your fingertips with simple, intuitive controls for functionality. Administrators spend less time managing threats and creating user reports.

The INKY Partner Program is designed for partners that deliver managed security solutions powered by emerging technologies. Fast deployment, multi-tenancy, and high margins are just a few reasons why many MSPs worldwide deliver next-generation anti-phishing protection with INKY.

Ease of doing business

Simple and accessible selling tools in our partner portal include a resource center for on-demand collateral and creative co-marketing to help our partners generate demand and leads.

Accelerated profits and growth opportunities

Dedicated sales, marketing, and technical resources are available to enable sales. Partners are generously rewarded through margin and gamification programs.

Flexible Licensing Models

INKY's flexible "pay as you grow" and "pay as you go" licensing models, whether managed by you or your customer, lets you position your brand as a trusted anti-phishing advisor to your customers.

Differentiate yourself from your competition

Offer highly accurate next-generation real-time protection against phishing attacks.

INKY's feature rich next-gen technology is the final line of defense for Managed Service Providers looking to secure the inbox for complete threat protection.
